**Subject:** Rogue Fiberglass Tank at Tremley Point Terminal

Mark,

As we discussed, Ashland believes that the rogue fiberglass tank that appeared on your terminal site during hurricane sandy did come from the LCP site. We would like to have the tank removed from it's location on your site and properly disposed of. Because LCP is a superfund site, the EPA remedial project manager, Jon Gorin, will need to approve of the disposal location prior to removal of the tank. This process will probably take about five days. We believe the best option is for Phillips 66 to utilize a contractor that has worked at this location to handle the removal and disposal of the tank and we will pay for the work and disposal. Please let me know which contractor and which disposal location as well as an estimated cost so I can get the necessary approvals from EPA and Ashland.

Thank you,  
Carrie McGowan
